

PLANT & TOOL HIRE

CARBON EMISSION REDUCTION POLICY

GAP Group aims to reduce carbon emissions year on year. This policy outlines the practices we have put in place in order to achieve this objective.

As Plant and Tool Hirers, we will:

- Monitor our carbon emissions regularly to ensure that we are meeting our policy objectives
- Invest in energy saving technology throughout our operations
- Introduce initiatives to promote carbon reduction across the organisation
- Where a choice exists, specify only those suppliers that are ISO14001 registered or have an environmental policy
- Seek to influence suppliers and their designers in areas where designs and specifications may be made more benign to carbon emission reduction
- Guarantee to take particular care in the disposal of all waste products
- React as appropriate to reduce carbon emissions at board level
- Engage and implement ISO14001 principles across the group in all that we undertake.

As Employers we will:

- Consistently seek to increase the awareness of all our employees and suppliers of our aim to reduce carbon emissions across all business practices
- Enforce the Reduce, Reuse, Recycle approach across the organisation
