Kubota KX080-4 excavator delivers all the power you need while going easy on the environment thanks to new direct injection diesel engine with Common Rail System (CRS) and Diesel Particulate Filter (DPF) muffler, and a host of functions and equipment including ECO PLUS. Furthermore, its digging force is superior among 8-tonne excavators.

**Kubota Original DI Engine with CRS and DPF Muffler**

Kubota’s original Direct injection (DI) engine helps maximize digging strength while minimising noise, fuel consumption and exhaust emissions simultaneously. The CRS electronically controls the fuel injection timing and amount in stages rather than all at once for optimal combustion. The results are greater efficiency, better fuel economy and less engine noise. Its combination with the Exhaust Gas Recirculation (EGR) and DPF Muffler reduces emissions to make the KX080-4 Stage III B compliant.
Auto Idling System
Kubota’s Auto Idling System is fitted as standard. When the control levers are left in neutral for longer than 4 seconds, the idling system automatically reduces the engine to idling RPM. When the levers are moved again, engine RPM is immediately reset to the dial-set RPM. This innovative feature reduces noise and exhaust emissions, in addition to saving energy and running costs.

Load-Sensing Hydraulic System
Kubota’s load-sensing hydraulic system ensures smoother operation, regardless of load size. It allows hydraulic oil to flow according to the specific range of the operator’s lever motion. As a result, it reduces fuel consumption and delivers greater overall operating performance.

Versatility
In addition to the first auxiliary circuit (AUX1), all KX080-4 excavators, including the 2-piece boom version, feature a second auxiliary circuit (AUX2) as standard equipment, making it easy to use a wide variety of attachments.

Digging Force
The KX080-4’s well-balanced arm and bucket provide unparalleled power for superior digging force among 8-tonne class excavators. This means that the KX080-4 can dig faster and more efficiently, even in the toughest conditions.

Smooth and Efficient Travel Performance
The KX080-4 is fitted with an advanced two-speed auto-shift feature, which automatically adjusts speed and traction force depending on load size and terrain to enhance travel performance and ensure smooth and easy operation.

1. Adjustable Maximum Oil Flow on Auxiliary Circuit (AUX1/AUX2)
Two proportional control auxiliary circuits (AUX1/AUX2) come as standard on the KX080-4. The convenient switch on the left and right lever allows simple and accurate yet minute operation for a wide variety of attachments. The maximum oil flow settings of both circuits are conveniently adjustable from the drivers seat via the digital display panel – no additional tools or complex manual adjusting procedures are necessary. You can programme up to five oil flow rates corresponding to specific attachments into the memory of the digital display panel. Programmed settings can be quickly retrieved for the required job. The system comes with nine pre-installed attachment icons.

Introducing ECO PLUS
Kubota’s original ECO PLUS prioritises fuel economy, and supports the environment.
Normally in Standard Mode (ECO PLUS), the KX080-4 delivers up to 18% fuel savings over the previous model. For tough digging applications, use Power Mode and experience a 5% productivity improvement over the previous model while consuming up to 12% less fuel.

STANDARD MODE (ECO PLUS)
• Focus on Lower Fuel Consumption

POWER MODE
• Improved Productivity • Lower Fuel Consumption

NOTE: Comparisons to previous models were performed using KUBOTA’s testing mode.
On the KX080-4, your comfort truly comes first. The luxurious cabin features a wider entrance, generous legroom and a deluxe seat. The Roll-over Protective Structure (ROPS) and Operator Protective Guard (OPG, ISO10262. Level 1 as standard, level 2 as optional with Top Guard.) maximise safety. Operation is greatly enhanced with more easy-to-use features than ever before.

DELUXE INTERIOR

Spacious & Comfortable

Deluxe Suspension Seat
Designed and engineered with comfort in mind, Kubota’s high-back suspension seat reduces strain and minimises operator fatigue. It reclines to accommodate your individual posture, and offers weight compensation, firm wrist support and retractable seat belts.

New Air Conditioner
Overall cooling performance in the cab has been improved, thanks to a stronger airflow.
1. New Digital Display Panel
Informative, interactive and functional, Kubota’s Intelligent Control System LCD panel accurately displays timely diagnostic readings and routine maintenance alerts. Information such as engine RPM, engine temperature, fuel level, machine hours and a 90 day usage register with recorded machine hours for each day the machine is worked are also displayed.

2. Easy-open Front Window
Unlike many excavator windows, the front window of the KX080-4 opens with ease. Just flip the latches on both sides of the window and slide it up. A gas-assist mechanism makes this action almost effortless.

3. Front Window Guard / Top Guard (Optional)
Operators who require additional protection from flying chips and debris when using some attachments or when antivandalism is important. Kubota provides the window guard mounting points around the front window as a standard feature.

LH Control Lever Console
Raise the safety control lever and the console moves up with it, providing more room for entry and exit. To prevent unexpected machine movement during entry or exit, all control levers are then disabled until the console is back in place.

ROPS/FOPS Cabin
Kubota has adopted a cabin that is certified as a Roll-over Protection Structure and a Falling Object Protection Structure. Coupled with the safety belt, this ensures maximum operator safety.

Advanced Visibility Mirrors
The big rear-view mirror offers a wide range of visibility. Together with the two side-view mirrors, you get a better view of your worksite, as well as your immediate surroundings.

Cup Holder
With the convenience of a bigger cup holder, you can quench your thirst and work longer without leaving the cab. Or store your cell phone. There is a 12V charging port located conveniently close by.
MAINTENANCE AND SAFETY

Dependability & Protection

Kubota goes the extra mile to simplify inspections and maintenance for the KX080-4. Vital components, battery, fluid tanks and filters are now easier to access than ever. And the new Automatic Regeneration System keeps the DPF muffler clean to keep the KX080-4 going for years ahead.

Triple Opening Bonnet

All three of the excavator’s access panels can open at once. This allows you to easily inspect and view the centrally located components of the KX080-4. You can easily access the hydraulic components under the centre bonnet, or the battery, oil filter and toolbox and grease gun space under the right bonnet. Maintaining your excavator has never been so easy.

Automatic Regeneration System

Kubota’s original automatic regeneration system automatically burns accumulated particulate matter (soot) in the DPF muffler to keep the muffler clean for longer operation. For safety reasons, automatic regeneration can be turned off with the inhibit switch when the excavator is operating in areas that are prone to fires. The current DPF regeneration condition is displayed on the digital display panel so you can focus on your job.
1. **Easy Maintenance**

Parts that require routine maintenance and inspection such as the engine oil level and V-belt are easy to access. In addition, all filters are located near the bonnet opening to simplify their replacement.

- A. Engine Oil Dipstick
- B. Engine Fan Belt
- C. Oil Gauge
- D. Radiator Cooler Tank

2. **Tank Electric Refuelling Pump**

The KX080-4’s standard diesel refueling pump includes an auto-stop function that minimizes spillage and increases safety. Complete tank filling takes approximately three minutes.

3. **Tight Tail Swing**

The KX080-4 is designed with a shorter rear overhang, ensuring improved workability in restricted space, increased versatility, and better stability. The rear overhang also features cast-iron protectors, which significantly reduce damage to the machine in space restricted work sites.

4. **Safety (Anti-drop) Valve on the Boom**

The KX080-4 is fitted with a boom-lowering control device as standard.

5. **Double Structure Exhaust Gas Pipe**

The double structure exhaust gas pipe helps to reduce the increases in exhaust gas temperatures caused by the DPF automatic regeneration process to minimise the risk of danger to people nearby and the environment.

6. **Variable Speed Fan**

The variable speed fan drive provides the right amount of cooling efficiency by regulating the engine fan speed according to the ambient temperature after the air passes through the radiator. The benefits are reduced fan noise and fuel savings through effective use of engine output.

---

**Two-Piece Hose Design**

Kubota’s innovative two-piece hose design for the dozer blade reduces hose replacement time by nearly 60% compared to one piece hose. This design virtually eliminates the need to enter the machine for maintenance.

**Compact Machine Width**

The KX080-4’s narrow 2200 mm width makes it ideal for working in close conditions, and much easier to transport between job sites.
Further & Deeper

The KX080-4 can be equipped with a two-piece boom so you can take on tougher jobs in a wider range of sites. Furthermore, with it’s easy to control and smooth operation the extra versatility even under difficult working conditions minimises operator fatigue.

2-piece Boom's Dynamic Working Range

The 2-piece boom offers a versatile working range so you can reach further, deeper, closer and anywhere in between.

A. Expanded working range
The versatile 2-piece boom offers a long reach and close retraction to make levelling large areas more efficient and productive. Plus, it’s easy to dig close to the machine, eliminating the need for constant repositioning. It’s particularly effective when working in narrow spaces.

B. Impressive dumping range
The 2-piece boom enables you to dump farther and higher, and offers a high bucket bottom position, making it smooth and easy to dump into Lorries without repositioning the excavator.

C. Efficiency in narrow spaces
When space is restricted, the 2-piece boom manoeuvres easily to simplify vertical digging and efficiently make deep walls at 90° angles. And, it offers a compact front swivel radius to make turning and lifting operations in tight spaces even easier.
Kubota Original Anti-theft System

Your KX080-4 is protected by Kubota’s industry-leading antitheft system. Only programmed keys will enable the engine to start up. Attempting to start with an un-programmed key will activate the alarm. Newly enhanced features include an alert to remind the operator to extract the key after operation, and an LED to alert potential thieves that the system is activated.

The red programming key programs the individual keys. The individual black keys start the engine.

Easy Boom Control

The user-friendly design and location of the 2-piece boom pedal makes operation extremely simple. Located to the left of the driving pedals, the operator simply needs to flip the footpad, and depress the right side of the pedal to extend the boom, or the left side to retract it. This feature greatly simplifies the footwork necessary to smoothly operate the boom.

Smooth Simultaneous Operation

Kubota’s 2-piece boom offers reliably smooth and fast performance. Its innovative hydraulic mechanism enables the operator to easily run the arm, boom, bucket, and swivel simultaneously, boosting work efficiency and increasing productivity.

Hydraulic system

• Pressure accumulator
• Hydraulic pressure checking ports
• Third line hydraulic return with lever
• 3-pump load sensing system
• Adjustable maximum oil flow on auxiliary hydraulic circuits (AUX1/AUX2)
• Auxiliary switch (AUX1) on right control lever (proportional)
• Auxiliary switch (AUX2) on left control lever (proportional)
• 2-speed travel with auto-shift

Undercarriage

• 12 V power source
• Front window guard mounting points
• 2 speakers and radio aerial
• Location for radio
• Cup holder
• Emergency exit hammer

Working equipment

• Overload warning buzzer
• Kubota original anti-theft system
• Anti-drop valve unit on the dozer
• Anti-drop valve unit on the arm

Cabin

• LH control lever console
• Travel motor with disc brake
• Swivel motor with disc brake
• Overload warning buzzer
• Kubota original anti-theft system
• Anti-drop valve on the boom (ISO8643)

Optional Equipment

Undercarriage

• 450 mm steel track (+ 50 kg)

Working equipment

• 1750 mm arm (-22 kg)

Safety system

• Anti-drop valve unit on the dozer
• Anti-drop valve unit on the arm

Others

• Special paint upon request
• Light weight version (-195 kg)
• Beacon light

### Area of Rotation

Please note:
- The lifting capacities are based on ISO 10567 and do not exceed 75% of the static lift load of the machine or 87% of the hydraulic lifting capacity of the machine.
- The excavator bucket, hook, sling and other lifting accessories are not included on this table.
SPECIFICATIONS

- **Machine weight**: 8700 kg
- **Operating weight**: 8775 kg
- **Bucket capacity, std. SAE/CECE**: 0.25/0.21 m³
- **Bucket width**:
  - With side teeth: 800 mm
  - Without side teeth: 700 mm

**Engine**
- **Model**: V3307-CR-TE4
- **Type**: Water-cooled, diesel engine
- **Output ISO9249**:
- **Number of cylinders**: 4
- **Bore × Stroke**: 94 × 120 mm
- **Displacement**: 3331 cc

**Hydraulic pumps**
- **P1, P2**: Variable displacement pump
- **Max. flow rate**: ω/min
- **Hydraulic pressure**: MPa (kgf/cm²)
  - P1, P2: 24.0 (2.45)
- **Auxiliary circuit (SP1)**:
  - Max. flow rate: ω/min
  - Max. hydraulic pressure: MPa (kgf/cm²)
    - 26.5 (2.70)
- **Auxiliary circuit (SP2)**:
  - Max. flow rate: ω/min
  - Max. hydraulic pressure: MPa (kgf/cm²)
    - 26.5 (2.70)
- **Hydraulic reservoir**: ω
- **Fuel tank capacity**: 2200 l
- **Max. travelling speed**:
  - Low: 6.9 (0.70) km/h
  - High: 15.2 (1.55) km/h

**Hydraulic tank pressure**
- **Max. flow rate**: 24.0 (2.45) l/min
- **Max. hydraulic pressure**: 26.5 (2.70) MPa

**Lifting point radius** (Min):
- **Blade Down**: 3.0/2.5 m

**Lifting point radius (Max)**:
- **Over-front**: 8.7 (0.88) m
- **Over-side**: 6.5 (0.66) m

**Bucket size (width × height)**:
- **Over-front**: 2200 × 500 mm
- **Over-side**: 1750 × 500 mm

**Neutral lift travel**: 2200 mm

**Rubber shoe width**: 450 mm

**Dozer size (width × length)**:
- **2100 Arm**: 1750 mm × 2150 mm
- **2200 Arm**: 1800 mm × 2200 mm

**Ground clearance**: 390 mm

WORKING RANGE

- **Lifting capacity** (ton):
  - **2100 Arm**:
    - **Over-front**: 10.8 (1.10) ton
    - **Over-side**: 10.3 (1.10) ton
  - **2200 Arm**:
    - **Over-front**: 12.1 (1.35) ton
    - **Over-side**: 11.8 (1.30) ton

Please note:
- *Working ranges are with KUBOTA standard bucket, without quick coupler.
- *Specifications are subject to change without notice for purpose of improvement.
